

# BYOD Minimum Requirements

Jesuit High School has developed a list of minimum device requirements that are flexible enough to meet the needs of both the classroom and personal preference.

- **Operating System** - a fully functional operating system: Windows 10 or 11, macOS and ChromeOS are recommended. iOS and Android can be made to work but these operating systems lack certain functionality.
- **Google Apps** - ability to access Google Apps for Education through the web browser or apps. Google Apps for Education include Google Classroom, Google Drive, Google Email, and other similar apps. The school will provide a Google account to each student.
- **Wireless** - ability to connect to a wireless network (WiFi) system using 802.11 N or 802.11AC  
(802.11 G is not recommended).
- **Screen Size** -A minimum screen size of 7." A 9" or larger screen is recommended.
- **Storage** - A minimum of 32 GB of local storage, either hard disk or solid state. 64GB or more is recommended (if local storage is low the device should allow for alternate external storage via a USB or SD port).
- **Battery** - a minimum battery life of five to six hours. If the device allows batteries to be swapped, students can bring multiple charged batteries to school to meet this standard.
- **Microphone/Headphones** - allows for the use of a microphone and headphones, either through separate jacks for the microphone and headphone, a combined microphone/headphone jack, USB port, or Bluetooth connection.
- **Built in Camera** - allows for the use of video conferencing through Zoom or Google Meets.

Every student must have broadband Internet access outside of school, either through WiFi or a physical connection, to complete homework assignments. This can be at home, in a relative's home, or in a public place such as a library or coffeeshop. Families with financial difficulties should investigate if they're eligible for the Internet Essentials program (\$10/month Internet: <http://www.internetessentials.com/>)

Below is a list of recommended equipment that some families may find useful:

- **Keyboard** - a physical keyboard is recommended, either built into the device or as a separate Bluetooth or USB keyboard.
- **Case** - a protective case or padded bag for their device.

Jesuit High School will provide user-level technology support, such as troubleshooting apps and software issues, to the student body. Physical damage or complex issues will require the families to find options for support off campus. In the event of a damaged device, students will be able to borrow a loaner device until their device has been repaired or replaced. Families are strongly encouraged to consider an extended warranty, breakage policy, or a customer support program when purchasing a new device.
