

## **Statement of Philosophy**

In keeping with the goal of Jesuit High School, the Mathematics Department supports the development of the total person for each student: intellectual, social, physical, and spiritual. Our primary mission is to address the intellectual dimension and their openness to growth by developing a curriculum which is oriented towards college-bound students and takes into account diverse learning abilities. We also try to create an environment which fosters academic excellence and nurtures reflective. We hope that ultimately, we help the students to be “agents for change,” and “men for others.”
